

# Reporting GLO assessment scores in MaineStreet

Have your GLO rubric handy and the ‘code’ for the rubric rows in “Reporting GLO scores in MaineStreet”. It gives a number to each row in your rubric for your GLO (for example, for row 1 in the GLO 3C rubric, it will be coded GLO 3C1 = Evaluation of scientific information. It will really help to already have a spreadsheet with your scores ready with students down the left, and rubric rows across the top.

Create Class Assignments: Find your rubric row codes. For each rubric row, you will create a separate “Class Assignment” in your course in MaineStreet.

For example GLO 3C1, GLO 3C2 and GLO 3C3. See tutorial below.

So, for each GLO, you will have 3-6 assignments, depending on the GLO and its rubric.

In Gradebook, enter a score of 1-4 for each Class Assignment for each student, just as we did in TK20 when we used the rubric and scored each row.

Using this approach, we will still be gathering the scores for individual rubric rows, and the scores will be more readily available for analysis, will document your students’ outcomes and can potentially be included on a student’s transcript.

Don’t forget to go back and update the scores as students complete any NPs. You don’t need a formal change request. You can just change them. Maybe do that when you are changing the grade.

Students will demonstrate the ability to be consumers of biological and other scientific information to better inform one's daily life.

Example: GLO3C

GLO 3C1

Evaluation of scientific information

GLO 3C2

Supplemental sources of information

GLO 3C3

Application to one's daily life

	4 Advanced	3 Proficient	2 Developing	1 Beginning
Evaluation of scientific information	Places stories presented by news and other media sources in a relevant context. Compares information with a deep understanding of the topic. Identifies evidence in the source and evaluates for credibility, quality, and scientific accuracy. Makes a judgement on the importance/accuracy of the information appropriately.	Places stories presented by news and other media sources in a relevant context. Compares information with a basic understanding of the topic. Identifies evidence in the source and evaluates for credibility, quality, and scientific accuracy.	Places stories presented by news and other media sources in a relevant context, but evidence is not identified and information is not evaluated.	Finds stories presented by news and other media sources, but does not appropriately place in a relevant context and/or does not consider credibility and accuracy of sources.
Supplemental sources of information	Uses appropriate terminology for online or written searches and finds extensive supplemental sources. Reports sources appropriately. Provides expertise of the author(s) of new source and/or evaluates the accuracy of the new information. Synthesizes the original and supplemental information to provide a more complete understanding of the topic.	Uses appropriate terminology for online or written searches and finds several related supplemental sources. Reports sources appropriately. Evaluates quality of supplemental information. Synthesizes the original and supplemental information to provide a more complete understanding of the topic.	Uses appropriate terminology for online or written searches and finds relevant supplemental information, but new sources are not appropriately reported, and/or supplemental information is not integrated into an analysis of the original information.	Performs searches, but supplemental information is not evaluated for credibility, accuracy or relevant to the initial information and is presented ineffectually.
Application to one's daily life	Provides several relevant examples of the impact of the new scientific information and its evaluation on one's daily life. Makes predictions about possible future situations in which the new information can better inform choices. Analyzes the consequences of these choices.	Provides a relevant example of the impact of the new scientific information and its evaluation on one's daily life. Makes predictions about possible future situations in which the new information can better inform choices.	Provides a relevant example of the impact of new scientific information on one's daily life, but ignores evaluation and/or no predictions are made about possible future impacts of the new information.	Provides an example of an issue in one's daily life, but does not discuss future implications, or the example is not directly related to the new scientific information.
